Measure #144 (NQF 0383): Oncology: Medical and Radiation – Plan of Care for Pain

2013 PQRS Options for Individual Measures:
Registry Only

This is a two-part measure which is paired with Measure #143: Oncology: Medical and Radiation: Pain Intensity Quantified. This measure should be reported if patient reports pain for Measure #143.

Description:
Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.

Instructions:
This measure is to be reported at each visit occurring during the reporting period for patients with a diagnosis of cancer and in which pain is present who are seen during the reporting period. It is anticipated that clinicians providing care for patients with cancer will submit this measure.

Measure Reporting via Registry:
All eligible instances when patient reports pain for Measure #143 make up the denominator for this measure. The listed numerator options are used to report the numerator of the measure.

The quality-data codes listed do not need to be submitted for registry-based submissions; however, these codes may be submitted for those registries that utilize claims data. There are no allowable performance exclusions for this measure.

Denominator:
All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain.

Denominator Criteria (Eligible Cases):
All eligible instances when patient severity quantified; pain present (1125F) is reported in the numerator for Measure #143.

AND:

Patient encounter during the reporting period (CPT) - Procedure codes: 77427, 77431, 77432, 77435, 77470

OR
Patient encounter during the reporting period (CPT) - Service codes: 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215

AND

Patient encounter during the reporting period (CPT) - Procedure codes: 51720, 96401, 96402, 96405, 96406, 96409, 96411, 96413, 96415, 96416, 96417, 96420, 96422, 96423, 96425, 96440, 96446, 96450, 96521, 96522, 96523, 96542, 96549

NUMERATOR:
Patient visits that included a documented plan of care to address pain

Numerator Instructions: A documented plan of care may include: use of opioids, non-opioid analgesics, psychological support, patient and/or family education, referral to a pain clinic, or reassessment of pain at an appropriate time interval.

Numerator Options:
Plan of care to address pain documented (0521F)

OR
Plan of care for pain not documented, reason not otherwise specified (0521F with 8P)

RATIONALE:
Inadequate cancer pain management is widely prevalent, harmful to the patient, and costly.

CLINICAL RECOMMENDATION STATEMENTS:
If the Pain Rating Scale score is above 0, a comprehensive pain assessment is initiated. (NCCN, 2011)

For management of cancer related pain in adults, the algorithm distinguishes three levels of pain intensity, based on a 0-10 numerical value obtained using numerical or the pictorial rating scale (with 0 being no pain to 10 being the worst pain). The three levels of pain intensity listed in the algorithm are mild pain (1-3); moderate pain (4-6); and severe pain (7-10). (NCCN, 2011)

The [NCCN] guidelines acknowledge the range of complex decisions faced in caring for these patients. As a result, they provide dosing guidelines for opioids, non-opioid analgesics, and adjuvant analgesics. They also provide specific suggestions for titrating and rotating opioids, escalation of opioid dosage, management of opioid adverse effects, and when and how to proceed to other techniques/interventions for the management of cancer pain.(1)

Treatment must be individualized based on clinical circumstances and patient wishes, with the goal of maximizing function and quality of life. (NCCN, 2011)

Clinicians must respond to pain reports in a manner appropriate to the type of pain (eg, acute vs chronic) and setting (eg, inpatient vs outpatient)… Appropriate responses may not always include more opioids but rather more detailed assessments, use of nonopioid analgesics or techniques, or nonpharmacologic interventions (eg, education, relaxation, and use of heat or cold).
