Measure #46 (NQF 0097): Medication Reconciliation

2013 PQRS OPTIONS FOR INDIVIDUAL MEASURES:
CLAIMS, REGISTRY

DESCRIPTION:
Percentage of patients aged 65 years and older discharged from any inpatient facility (e.g., hospital, skilled nursing facility, or rehabilitation facility) and seen within 30 days following discharge in the office by the physician providing on-going care who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented.

INSTRUCTIONS:
This measure is to be reported at an outpatient visit occurring within 30 days of each inpatient facility discharge date during the reporting period. This measure is appropriate for use in the ambulatory setting only. There is no diagnosis associated with this measure. This measure may be reported by clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding. This measure is not to be reported unless a patient has been discharged from an inpatient facility within 30 days prior to the outpatient visit.

Measure Reporting via Claims:
CPT or HCPCS codes and patient demographics are used to identify patients who are included in the measure's denominator. CPT Category II codes are used to report the numerator of the measure.

When reporting the measure via claims, submit the listed CPT or HCPCS codes, and the appropriate CPT Category II code(s) OR the CPT Category II code(s) with the modifier. The reporting modifier allowed for this is: 8P- reason not otherwise specified. There are no allowable performance exclusions for this measure. All measure-specific coding should be reported on the claim(s) representing the eligible encounter.

Measure Reporting via Registry:
CPT or HCPCS codes and patient demographics are used to identify patients who are included in the measure's denominator. The numerator options as described in the quality-data codes are used to report the numerator of the measure.

The quality-data codes listed do not need to be submitted for registry-based submissions; however, these codes may be submitted for those registries that utilize claims data. There are no allowable performance exclusions for this measure.

DENOMINATOR:
All patients aged 65 years and older discharged from any inpatient facility (e.g., hospital, skilled nursing facility, or rehabilitation facility) and seen within 30 days following discharge in the office by the physician providing on-going care.

Denominator Criteria (Eligible Cases):
Patients aged ≥ 65 years on date of encounter
AND
Patient encounter during the reporting period (CPT or HCPCS): 90791, 90792, 90832, 90834, 90837, 90839, 90845, 99201, 99202, 99204, 99205, 99212, 99213, 99214, 99215, 99216, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99346, 99347, 99348, 99349, 99350, G0402, G0438, G0439
NUMERATOR:
Patients who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented

Definition:
Medical Record – Must indicate: The clinician is aware of the inpatient facility discharge medications and will either keep the inpatient facility discharge medications or change the inpatient facility discharge medications or the dosage of an inpatient facility discharge medication.

NUMERATOR NOTE: Medication reconciliation should be completed and documented within 30 days of discharge. If the patient has an eligible discharge but medication reconciliation is not performed and documented within 30 days, report 1111F with 8P.

Numerator Quality-Data Coding Options for Reporting Satisfactorily:
Documentation of Reconciliation of Discharge Medication with Current Medication List in the Medical Record
CPT II 1111F: Discharge medications reconciled with the current medication list in outpatient medical record
OR
If patient is not eligible for this measure because patient was not discharged from an inpatient facility within the last 30 days, there are no reporting requirements in this case.
OR
Discharge Medication not Reconciled with Current Medication List in the Medical Record, Reason Not Otherwise Specified
Append a reporting modifier (8P) to CPT Category II code 1111F to report circumstances when the action described in the numerator is not performed and the reason is not otherwise specified.
1111F with 8P: Discharge medications not reconciled with the current medication list in outpatient medical record, reason not otherwise specified

RATIONALE:
Medications are often changed while a patient is hospitalized. Continuity between inpatient and on-going care is essential.

CLINICAL RECOMMENDATION STATEMENTS:
No trials of the effects of physician acknowledgment of medications post-discharge were found. However, patients are likely to have their medications changed during a hospitalization. One observational study showed that 1.5 new medications were initiated per patient during hospitalization, and 28% of chronic medications were canceled by the time of hospital discharge. Another observational study showed that at one week post-discharge, 72% of elderly patients were taking incorrectly at least one medication started in the inpatient setting, and 32% of medications were not being taken at all. One survey study faulted the quality of discharge communication as contributing to early hospital readmission, although this study did not implicate medication discontinuity as the cause. (ACOVE)

First, a medication list must be collected. It is important to know what medications the patient has been taking or receiving prior to the outpatient visit in order to provide quality care. This applies regardless of the setting from which the patient came — home, long-term care, assisted living, etc. The medication list should include all medications (prescriptions, over-the-counter, herbs, supplements, etc.) with dose, frequency, route, and reason for taking it. It is also important to verify whether the patient is actually taking the medication as prescribed or instructed, as sometimes this is not the case.

At the end of the outpatient visit, a clinician needs to verify three questions:
1. Based on what occurred in the visit, should any medication that the patient was taking or receiving prior to the visit be discontinued or altered?

Date: 12/19/2012
Version 7.2
CPT only copyright 2012 American Medical Association. All rights reserved.
2. Based on what occurred in the visit, should any prior medication be suspended pending consultation with the prescriber?

3. Have any new prescriptions been added today?

These questions should be reviewed by the physician who completed the procedure, or the physician who evaluated and treated the patient.

- If the answer to all three questions is “no,” the process is complete.
- If the answer to any question is “yes,” the patient needs to receive clear instructions about what to do — all changes, holds, and discontinuations of medications should be specifically noted. Include any follow-up required, such as calling or making appointments with other practitioners and a timeframe for doing so. (IHI)
